

Dunnage Circulation: (cardboard, air bags, sheet wood, empty pallets)

Dunnage (cardboard) purchased is knocked down cardboard boxes (close to pallet size).

These knocked down cartons work well in:

- cushioning & protecting stacked freight
- protecting pallets of bags by skirting/shrouding dunnage around all four sides & top of pallet
- placing under loose 55 gallon drums to keep them from sliding on trailer floor

TERMINALS:

Please set up a station or two on your dock (stack on pallet or cart or rack, etc) to both gather dunnage when unloading trailers and, take from when loading trailers. Keep this station straight so it does not turn into a garbage pile. Keep it accessible to dock personnel – do not bury.

This dunnage can be utilized over and over. It does not come cheap, so do your part to keep it in circulation. DO NOT THROW AWAY or leave it on trailer floors.

KEEP DUNNAGE IN CIRCULATION

Other loading tools to keep in Circulation:

- Air bags – keep within the LME Direct lanes – excess to the hubs
- Logistic Beams – keep within the LME Direct lanes – excess to the hubs
- Load Bars – keep within the LME Direct lanes – excess to the hubs
- Straps – keep within the LME Direct lanes – excess to the hubs
- Pallet Racks/Freight Tables – keep within the LME Direct lanes – excess to the hubs
